Software Engineer

Profile

As a passionate developer with 6+ years of experience, I have honed my skills in various technologies and programming languages. Currently, I specialize in JavaScript and possess a strong proficiency in it. My expertise lies in architecting and developing full-scale applications, and I have successfully contributed to both startup environments and larger teams working on cohesive applications.

Employment History

Sr. Software Engineer

Sept 2023 - Feb 2025

Egenie Next Solutions - Lahore

- Exclusively working as a full-stack engineer, I collaborated with clients as part of a team to identify and incorporate new features into existing projects developed on JavaScript stacks such as MERN, PERN, and Next Js.
- Exclusively working on a mobile application features and functionalities for Canadian client, implementing new features and functionalities on both platforms Android and IOS built on React Native.
- Exclusively worked with ReactJs Applications, Hand on experience on React tools and libraries like Redux, React Router, Material Ui, Core Ui, Ant design
- Successfully deployed projects on various platforms, including AWS, Go Daddy, and Vercel ensuring seamless integration, optimal performance and high availability across platforms.
- Conducted client calls to identify project requirements, troubleshoot issues, and design application solutions tailored to client needs for applications developed in JavaScript stack (MERN, PERN, and Next Js, React Native).
- Built from scratch and refined web applications with Next Js and MERN, delivering pixel-perfect and responsive designs for a high-quality, visually appealing user experience.
- Integrated RESTful and Third party APIs across all projects, enabling seamless data exchange and feature expansion for clients in diverse industries.
- Refactored a React Native mobile application, improving performance and scalability, ensuring optimized experiences on both iOS and Android platforms.
- Developed key functionalities for a Canadian client's mobile app, enhancing usability and engagement on Android and iOS using React Native.
- Successfully managed the development from scratch and deployment of mobile applications for Android and IOS from requirements to deployment.
- Hands-on experience with CSS3.
- Experienced with TypeScript and Tailwind CSS.

Frontend Enigneer

Jan 2022 - Sept 2023

Feedni - Dubai, Remote

- Solely developed all frontend operations, functionality, and React components utilizing React and Redux framework.
- Exclusively work with CSS to make design responsive
- Collaborated as a team member, working alongside designers, backend developers, and other stakeholders to deliver successful projects on a comprehensive MERN stack SaaS application.
- Integrated and worked with both RESTful APIs and third-party APIs.
- Proficient in React, Redux, Material-UI, Ant Design, CoreUI and experienced with AWS tools like Amplify, S3, and Cloudwatch.
- Utilized Git for version control and effectively collaborated with team members using Microsoft Teams and Hubstaff for project management.

Employment History

Software Engineer

Aug 2019 - Nov 2021

Partum Solutions - Quetta, Pakistan

- Developed Management and Inventory systems from scratch for Shops, Hospitals, Pharmacies and other stock business using Node.js and Express.js for the backend, and React for the frontend.
- Led requirements gathering, system architecture design, and prototype development.
- Successfully delivered projects on time, meeting requirements and ensuring client satisfaction.
- Created web applications, such as online ticketing systems, school management systems, and landing pages for businesses.
- Worked on SaaS applications tailored to the needs of large-scale enterprises.
